

1/11

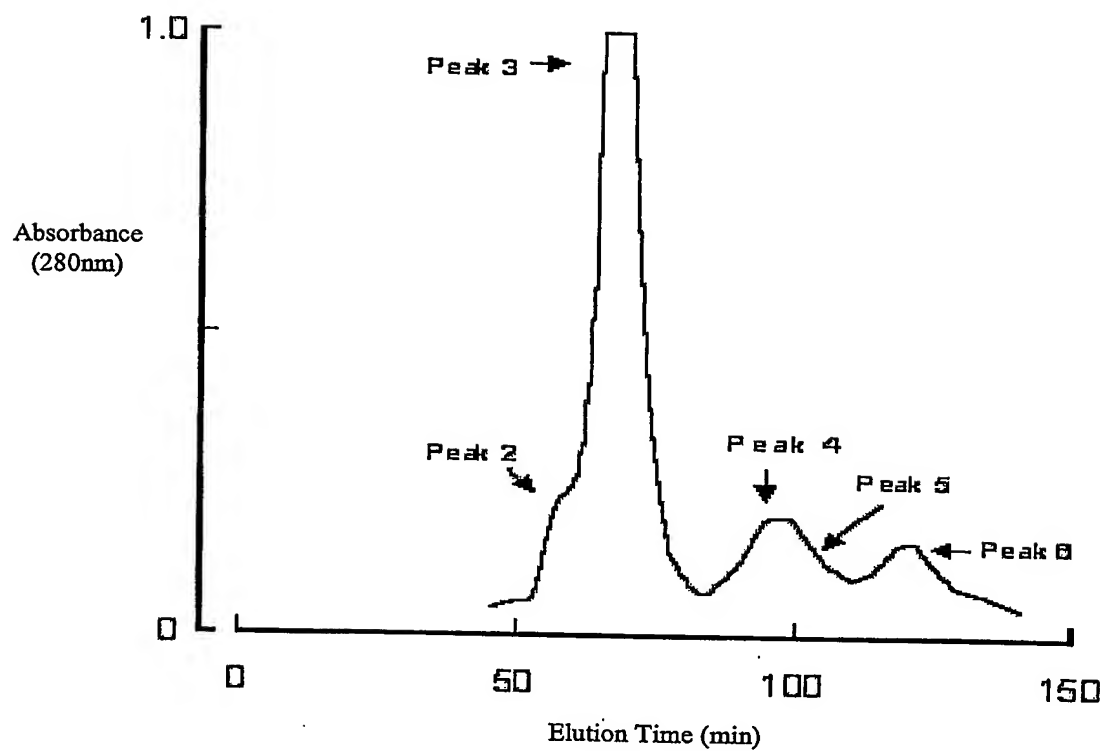

Figure 1. Gel filtration chromatography of bovine 6-30 kDa whey fraction

2/11

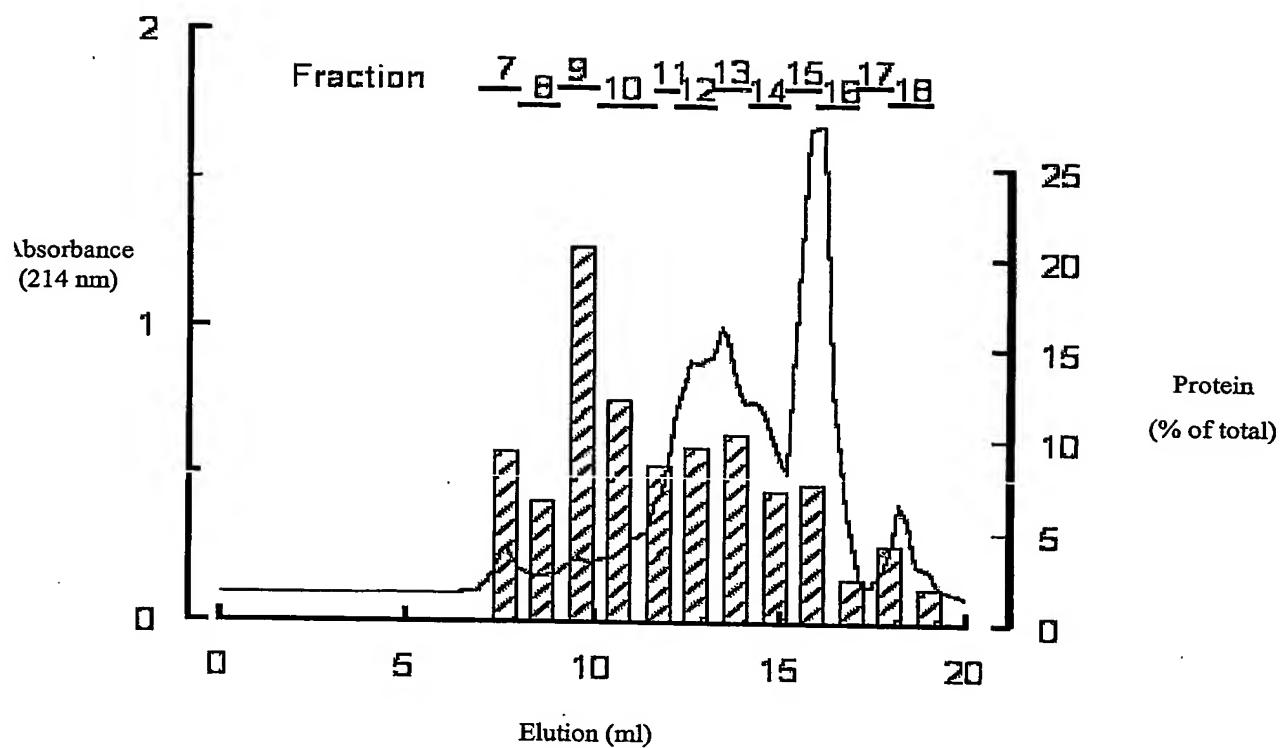

Figure 2. Resolution of inhibitory peak S4 by peptide chromatography

3/11

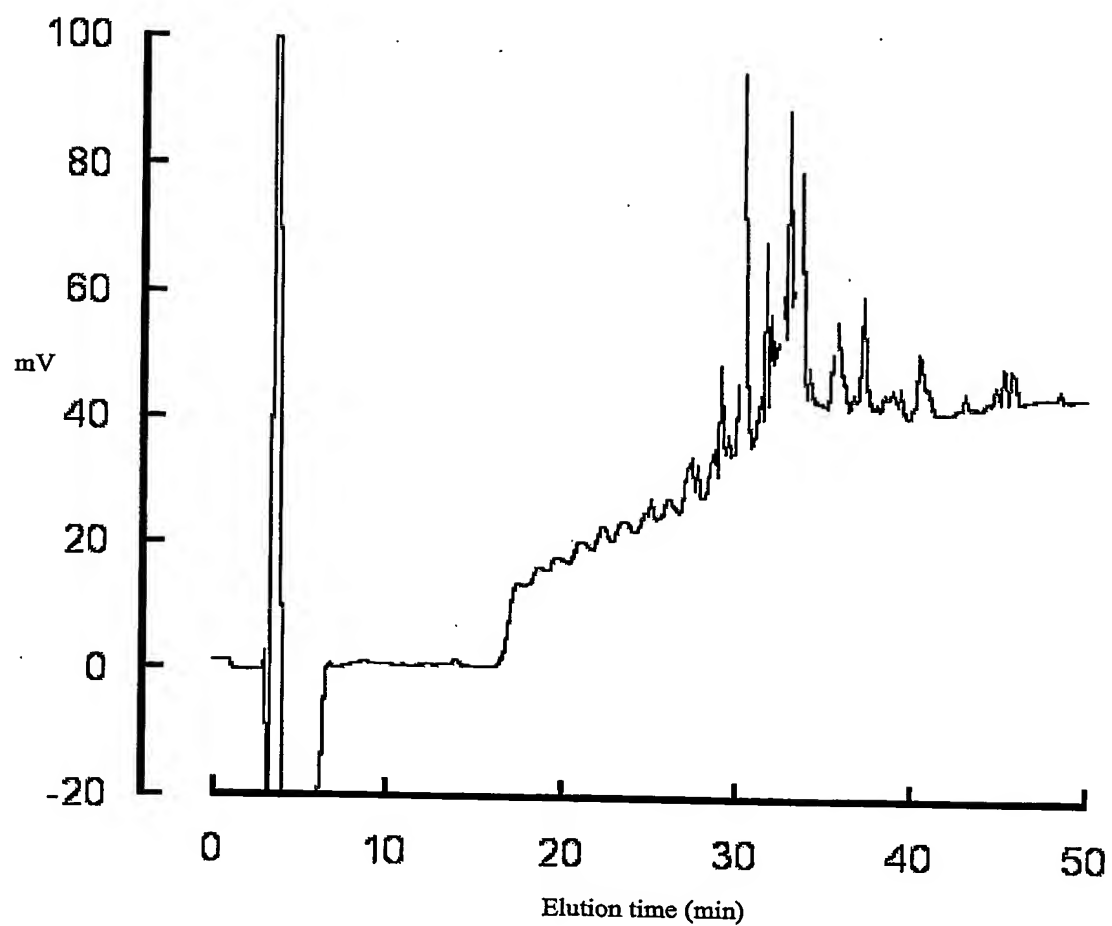

Figure 3. Resolution of peptide fraction P8-11A by reversed phase chromatography

4/11

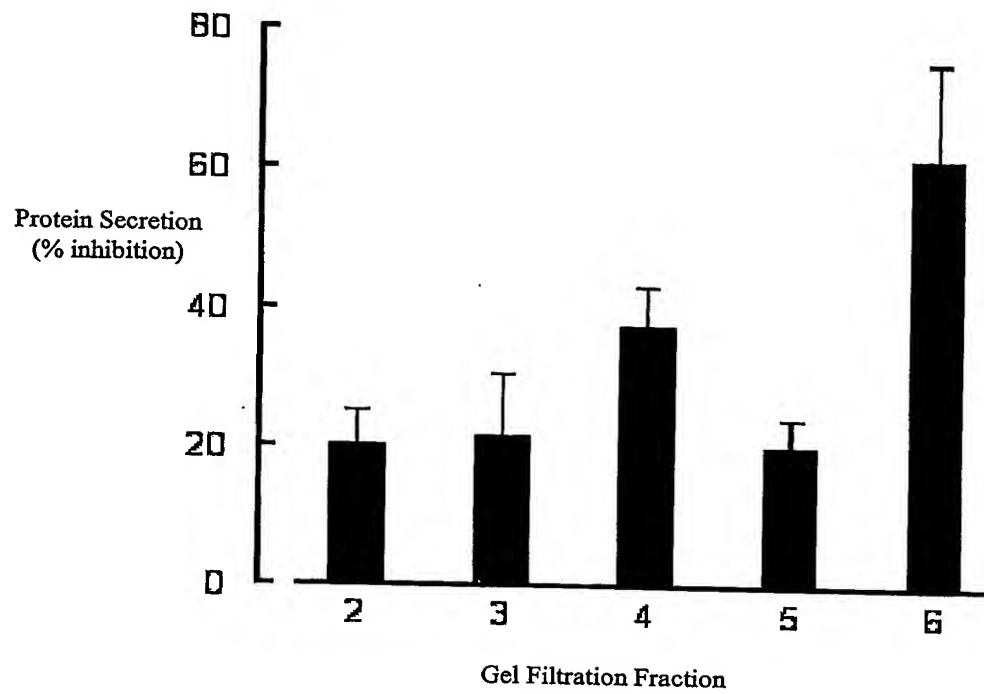

Figure 4. Bioassay of gel-filtered whey fractions

5/11

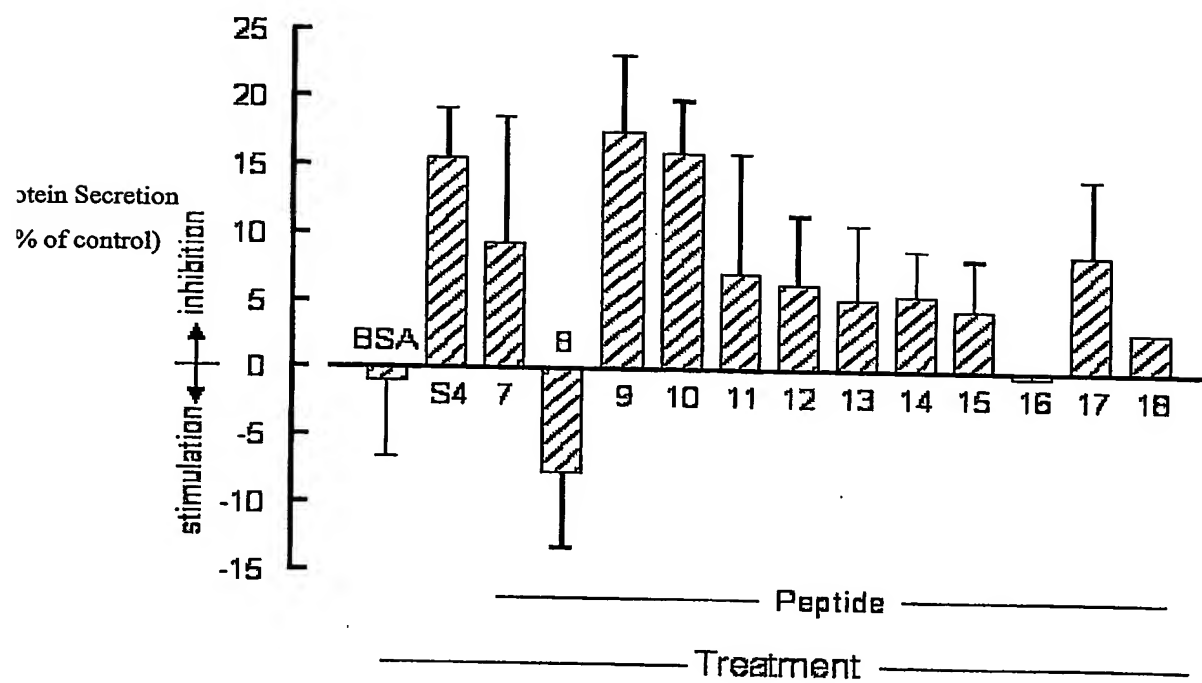

Figure 5. Inhibition of protein secretion by bovine whey peptide fractions

6/11

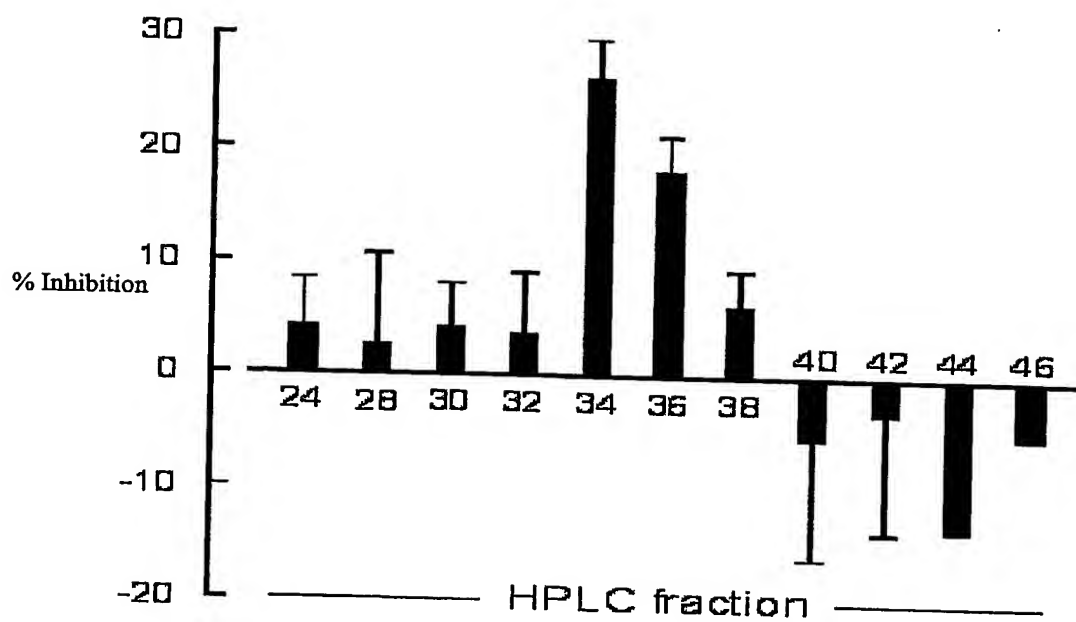

Figure 6. Inhibition of protein secretion by HPLC-resolved fractions

7/11

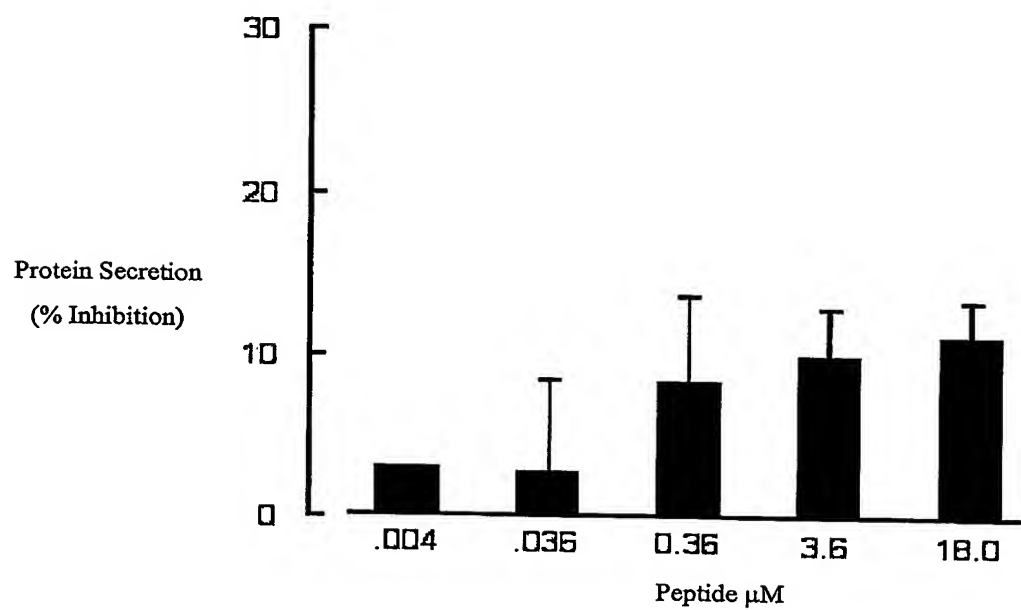

Figure 7. Inhibition of protein secretion in mammary cell cultures by synthetic peptide A

8/11

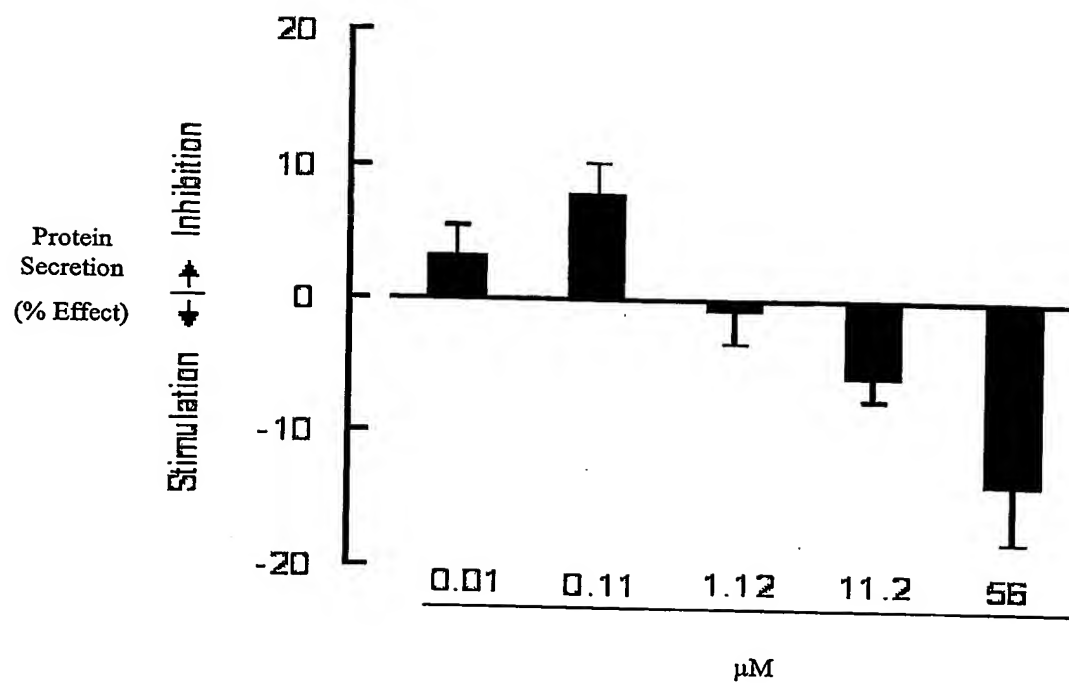

Figure 8. Inhibition of protein secretion in mammary cell cultures by synthetic peptide B

9/11

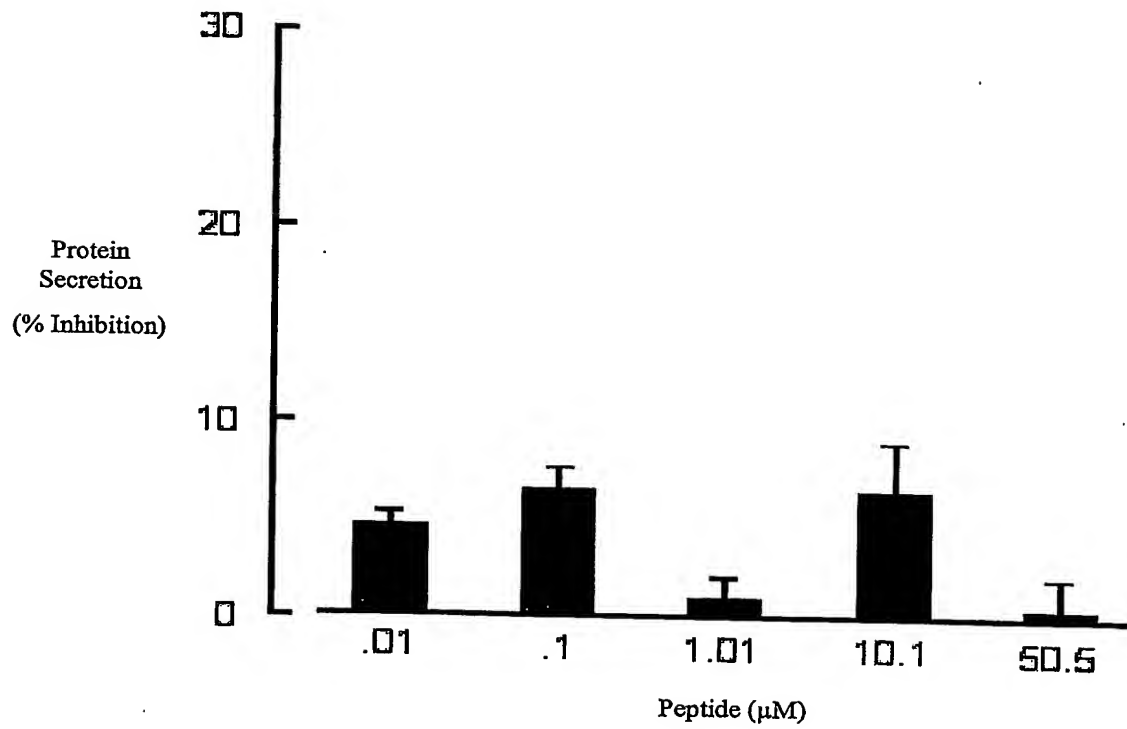

Figure 9. Inhibition of protein secretion in mammary cell cultures by peptide C

10/11

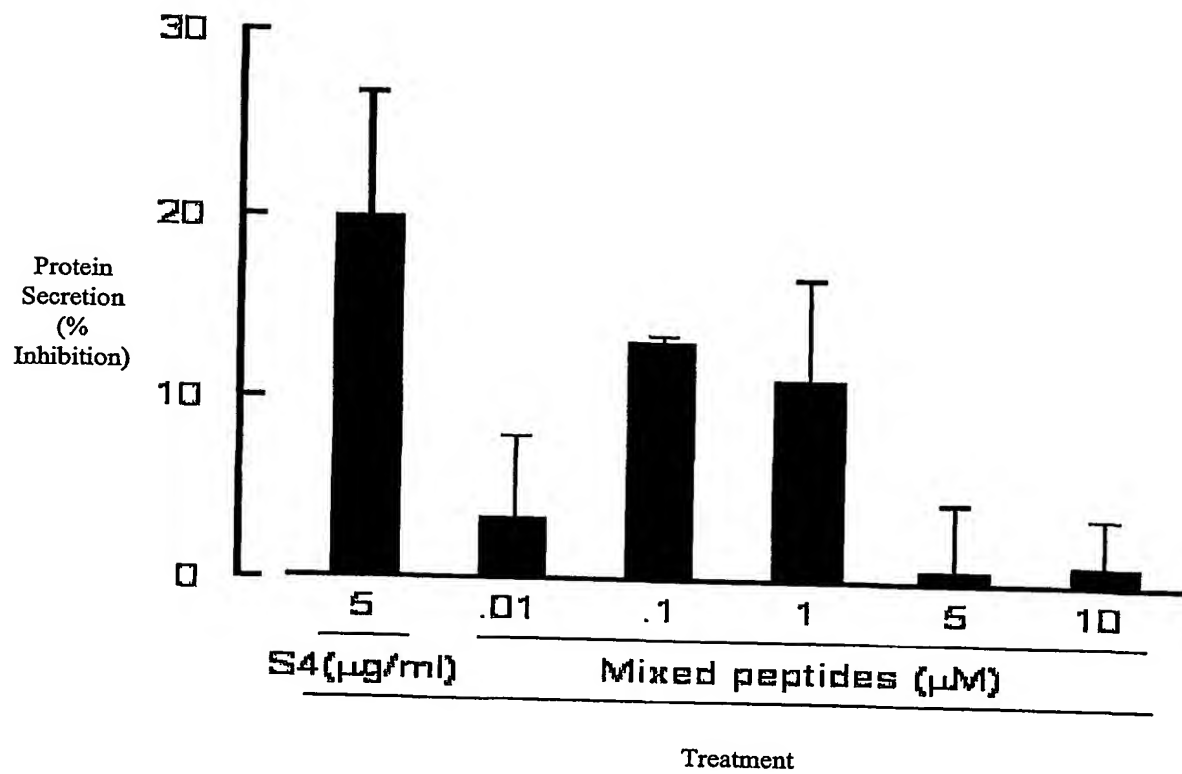

Figure 10. Inhibition of protein secretion in mammary cell cultures by a combination of synthetic peptides A, B and C.

11/11
